---> Make login/register like ITO on homepage pop-up. Large pop-up.

---> Big image on slider is changing from both directions with 2 images. Text in image is HTML. On each slide there will be 2 images. Once the slide change both images will go the opposite direction; and always bouncing on come back. (Check image attached.)

SLIDER I will need 1 more options
One is like this http://themes.themepunch.com/?theme=revolution_jq
Therefore, make 2 possible slider effects.
I like the way you have the shadow on the sides to move left / right. Keep it same colors like logo. So shadows make them blue or white.

---> The footer… you see contact, eyeglasses, sunglasses, specialty, FAQ, shipping… all these are titles…and you should see some arrow in the middle…
If that arrow is clicked the footer will open upwards and have a bunch of links inside. Give it some nice effects on mouse overs etc.
(Check image attached.)
Maybe this will help:
http://return-true.com/examples/slidefooter2.html CODE IS HERE :
http://return-true.com/2010/04/jquery-pop-up-footer-version-2/

---> There have been some changes to primary PSD and these are shown in additions.jpg. They involve Language Flag, ecommerce part add to cart and need some nice drop down effects.

Menu also needs drop down similar to : http://themeforest.net/item/petsy-shop-responsive-magento-theme/full_screen_preview/5377876 but something nicer to match colors etc.
